

Nick Pai Sho

Rules

Objective

Move your **White Lotus** to the **center** of the board or checkmate your opponent to win!

Capturing

Capturing follows the **Avatar cycle**. To capture an enemy's piece(s), move your piece **next to theirs** and remove theirs from the game.

Your piece will be **captured** if you move it next to an enemy tile that can capture it. If next to both a capturable enemy and one that can capture it, **both captures take place**.

The **Avatar** can capture any tile and can be captured by any tile. After yours has been captured, if you capture your opponent's **Avatar**, yours will **respawn** in its starting location. Move any tile currently in that spot to a surrounding empty spot.

Components

Each player has the following:

Air **Water** **Earth** **Fire**

x3

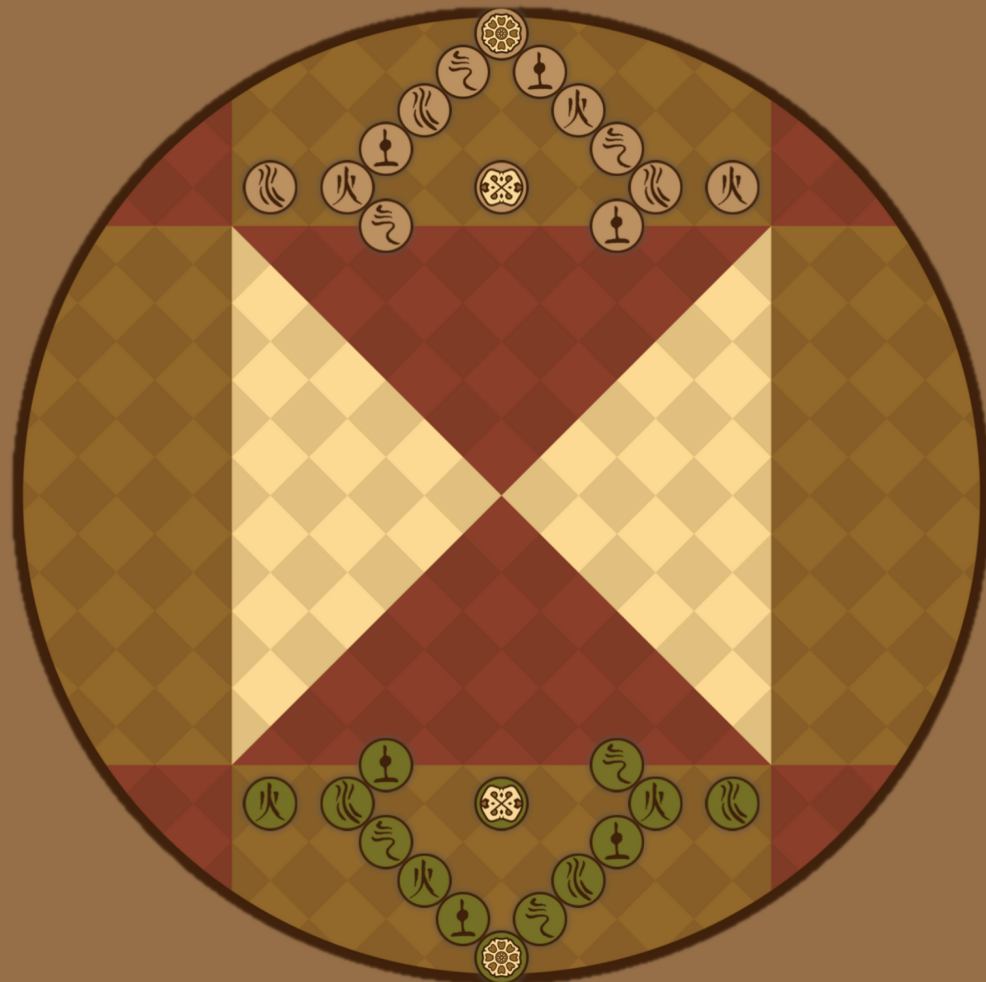

Avatar

White Lotus

Setup

Set up the board as shown:

White Lotus

Your **White Lotus** is your **King**. It cannot capture, and instead of being captured, it's put in **check** - you must remove it from check on your turn or it's checkmate!

You may not move your **Lotus** into check (even for a winning move), including adjacent to the enemy **Lotus**.

If no player can move their **Lotus** to the center, the game ends in a **stalemate**.

Movement

Every tile can move to any empty point surrounding it. **Non-Lotus** tiles can also jump over friendly tiles. You can chain jumps, but you can only do **one** type of movement per turn.
